## How To Set Up Extra Security For Your Account

This document shows you how it's easy to add extra security to your online banking experience and explains what this extra security is all about – and why we recommend that you add it to protect yourself against identity theft and fraud.

You can add it no matter where you do your online banking at home, in the office or any other personal computer. Everywhere you are, you are protected.

In order to do it you should:

1. Start by logging in to your online banking as you always do, using your User ID and password.

### Sign-On

Sign-On ID

Password

Can't remember your Password? Click [HERE](#)

2. Choose three security questions and answers and enter your email address.

To strengthen online banking security, an additional authentication layer has been added. In the next few steps we ask that you please setup a new security question and answer.

**1 Question**  (min. 10 characters)  
Answer  (min. 6 characters)

**2 Question**  (min. 10 characters)  
Answer  (min. 6 characters)

**3 Question**  (min. 10 characters)  
Answer  (min. 6 characters)

E-Mail Address

**Please provide the e-mail address that you would like to use in the event that you would like to reset your security questions and answers.**

E-Mail Address

If you are currently using a computer that you plan to normally use for online banking, you can enable it for secure and convenient online banking with a Digital Certificate. Your Digital Certificate will authenticate you and eliminate the need to answer a security question each time you access your account. We strongly recommend that you only enable computers that you plan to normally use for online banking.
